

Guide for ordering a soap stamp.

I require a good quality picture ideally larger than the required stamp. JPG, PNG or BMP are fine but I can convert some other images.

The design of the image is the key to how well the stamp will work. Fine lines and detail will not transfer to soap very well nor will fancy script fonts (see samples below). I am happy to advice before purchase if you are unsure.

This will not work

This will work

The size of the image is not related to the stamp size so please provide the size in inches or metric. I normally keep the same ratio when re-sizing an image so the finished stamp may not be exactly the size given but will normally be the same as the width specified. If this is a problem please let me know when ordering.

Some images may require enhancing or if you are unable to convert multi coloured images. If this is the case I will let you know as there may be a small charge.

The black areas of the image will end up as the raised part of the stamp and will leave an indent into the soap. I flip the image prior to creating the stamp so it comes out the correct way on the soap.
